Date: May 14, 2007
To: All Kidde Fire Systems Distributors
From: Patrick Sullivan, Product Manager, Clean Agents
Subject: New and Improved Carbon Dioxide Manual

Kidde Fire Systems is pleased to announce that we have launched a new revision of the Carbon Dioxide systems Design, Installation, Operation and Maintenance manual.

The new manual includes updated product graphics and references to the current version of NFPA 12, improved guidance on designing of systems (total flood and local application) and details on obsolete product that you may still encounter in the field.

The new manual is available for immediate download from the distributor secure area of the Kidde Fire Systems website. You may also order additional copies through your customer service representative.

We trust that you find the new and revised manual easier to use when designing, installing and servicing Kidde Carbon Dioxide systems.

We thank you for your continued support.
